IPLase Mask

Skin stresses reduction · Anti-thermal damage

ONE LIFE - ONE SKIN

IPLase Mask

Post Treatment Cream Skin Stresses Reduction

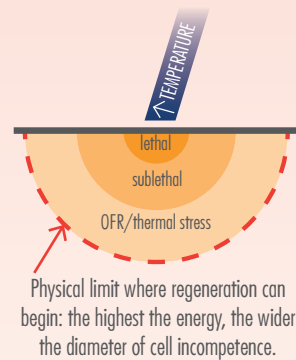

Excessive temperature increases can alter skin active proteins 3D structure. A few degrees augmentation is sufficient. Hence, repeated heating of epidermis, dermis or surrounding areas may cause acute or long term damages.

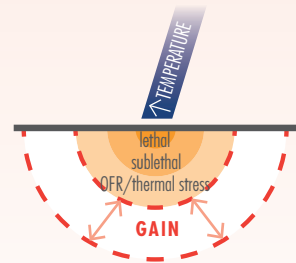

Oxidative stress storms, occurring after other kinds of deep procedures (medium depth or deep peelings ie) are considered as potentially harmful for the skin.

IPLase Mask is an innovative product recently developed by SKIN TECH that helps to prevent or limit signs linked to excessive temperature exposures or oxidative stresses. It helps to limit the skin burning sensation and helps the skin to regenerate and recuperate a normal skin complexion.

STRESS ORIGINATED DAMAGES

HOW TO HELP REGENERATION

It could be interesting to protect cells against OFR and/or thermal stress (HSP) in order to allow a faster recovering.

How to help regeneration

One of the objectives of IPLase Mask, containing a **HSP inducer**, is to produce greater resistance in the area surrounding the theoretical target of energy to protect neighbouring cells, facilitating skin regeneration and protecting skin from many unpleasant side effects.

IPLase Mask helps to protect skin from stress thanks to essential actives:

- **SOD (natural Superoxide Dismutase)**: powerful antioxidants that can defend the skin cells against peroxidation of fatty acids and protect DNA against free radicals.
- **Ubiquinone (coenzyme Q10)**: liposoluble "Vitamin-like" component that protects against the formation of free radicals at the intracytoplasmic level.
- **HSP (Heat Shock Proteins) inducer**: proteins secreted in response to any kind of stress, causing an increase in skin heat resistance, improving skin healing, tending to reduce the complications of re-epitheliation. IPLase Mask progressively increases the concentration in natural HSPs.

Other components:

- Vitamins C, A, H
- **Methionine**: anti PIH, methyle donor for Taurine, helping the body to synthesize Phaeomelanine and not Eumelanine
- **Organic Silicium**: regeneration
- **Urea**: moisturizing
- **Allantoine**: skin healing promotion
- **Bifida ferments extracts**: helps to repair DNA after light induced DNA damage
- **Chondrus Crispus extracts**: immunomodulator

Instructions for use

Apply a thick layer immediately after having subjected the skin to any source of energy. It is recommended to continue applying IPLase Mask twice a day during the entire time between treatment sessions with laser, Intense Pulsed Light or any other type of energy or stress inducing therapy. This is to increase resistance to stress.

It is recommended to protect the skin from the sun if the area is going to be exposed to the sun afterwards (repeat application of SKIN TECH Melablock-HSP SPF 50+ or SKIN TECH Melablock-HSP Spray SPF 25 every 2-3 hours while sun exposure persists). In any case, it is recommended that you follow your doctor's indications.

Precautions

- Avoid contact with eyes and mucous membranes
- Keep out of reach of children
- Keep in a cool place
- In case of irritation, interrupt use
- In case of any abnormal reaction, consult your doctor immediately

Post laser, Intense Pulsed Light,
fractional laser.

Post thermogenic radiofrequencies.

Post medium depth peelings (TCA).

Post phenol peels.
